Paper Presented at the 1980

There seems to be an easy way to do—and a hard way. Given the choice, Annual Meeting of the American all of us take the easy route simply because it's more efficient, saves time Psychiatric Association, May 5-9, and energy. If it's too easy, some of us feel guilty. We get the uncomfortin San Francisco 274

able sense that we're missing something if we don't go the laborious, tried-
About the Author 291

and-true pattern. If it's that easy, it must not be good, might even be sinful.

But after a while, the easy way becomes the ordinary way and we forget the old road. When you've lived in an area long enough to have traveled between two cities before the interstates and freeways were built, try the old familiar highway just once. You'll find once is enough. The start-and-stop congestion, the total disorder, the growing frustrations far over-shadow any remaining nostalgia you may have harbored. You have enough of such local traffic at the beginning and end of each run on the Interstate.

Now the problem. Suppose you met someone who had never driven on an interstate. All his life, he has driven only in local traffic. He's heard about such superhighways. He might even have seen one from a distance or heard the rumble of vehicles or smelled their exhaust fumes. He rationalizes any number of reasons why he hasn't and won't go interstate; he doesn't need to, he's satisfied the way he is; they travel too fast so it's not safe; you have to go out of your way to get on it; it's full of strangers from all over the place so you don't

know whom you'll meet so you can't trust them; your car isn't in very good condition and it might break down and leave you stranded without anybody to help, in some lonely spot you never heard of. Maybe sometime you'll try it, but not right now.

Suppose you happened to see a construction order from the state highway department to begin demolition of the old highway so that all local traffic will have to go interstate eventually, like it or not. What do you do?

What *would* you do? Nothing? Suppose the recalcitrant is an old and dear

tia. Back in the old railroad days, a locomotive could pull only four or five (Click!)

cars at a time because if more cars than that were added, it would simply Going from local traffic to interstate does indeed require an entry or spin its drive wheels trying to get started. Inertia. Then a smart young acceleration lane to merge into the flow. If you can make the tools sup-thinker came along and invented the sliding coupler, which let the loco-plied by local traffic apply in the design and building of the ramp, so much motive pick up the slack—and inertia—one car at a time. Ask any freight the better. You need to remember especially the inertia factor—pick up conductor what it was like to be in a caboose on the tail end of a 100-car the slack on one loaded car at a time, start in low gear so you don't stall train when he highballs the engineer. Instantaneous zero to thirty miles the engine, then shift smoothly; automatic transmissions don't know when per hour. It's the same with automobiles. The transmission is there to *you* need to shift. If the design is correct, your friend is cruising along the provide big torque in low gear to overcome inertia. Once under way at interstate long before the old highway is closed down.

cruising speed, power is required only to overcome wind resistance and You do the best you can.

road friction—and very little of it relatively. The hard case is the catapult launch on an aircraft carrier, which does the job in a hurry and not too Robert A. Monroe gently. Guns are inertia-overcoming devices for bullets.

Faber, Virginia

It's doubtful that explosive or catapult methods to full-speed interstate 1985

in a different form will be less than confusing and bewildering, even with modification to local traEc standards. Take this as an illustration: ... I can't get the stuff under a null point, there ought to be a better way to do this!

(Your uncontrolled emotion of anger is using much of your energy. A very human response.) A better way to do it ... stuff can't help being what it is, you kick a stone in your path and it hurts your toe, why get angry at the stone, you

Part I

1.

Old Local Traffic

If there is a first and obvious point to be made, I can report that I am still alive physically after twenty-five years of exploring personally the out-of-body experience. A little timeworn, but still more or less operational.

There were several moments when I was not so sure. However, some of the best medical authorities have assured me that the physical problems I have encountered have been simple cause-and-effect of living in the culture/civilization of mid-twentieth century America. Some take another position. I am still alive as a *result* of such OOB activity. Take your pick.

So it would seem that one can practice “going out of the body” regularly and survive. Also, after having been tested periodically by experts, I can still make the statement that I am reasonably sane in a not so reasonably sane world. There are many people who do strange things and get away with it. A century ago, it might have been going over Niagara Falls in a barrel.

What is the out-of-body experience? For those who have not encountered the subject as yet, an out-of-body experience (OOBE) is a condition where you find yourself outside of your physical body, fully conscious and able to perceive and act as if you were functioning physically—with several exceptions. You can move through space (and time?) slowly or apparently somewhere beyond the speed of light. You can observe, participate in events, make willful decisions based upon what you perceive and do.

You can move through physical matter such as walls, steel plates, concrete, earth, oceans, air, even atomic radiation without effort or effect.

You can go into an adjoining room without bothering to open the door.

You can visit a friend three thousand miles away. You can explore the moon, the solar system, and the galaxy if these interest you. Or—you can enter other reality systems only dimly perceived and theorized by our time/space consciousness.

It is not a new phenomenon. Recent surveys indicate some 25 percent FAR JOURNEYS

5

of our population remembers having at least one such experience. Man's Instead, I stubbornly began a search and research into the phenomenon history is full of reports of such events. In earlier literature, it was com-out of self-preservation and, as the fear and panic subsided, out of growing monly labeled "astral projection." I began by refusing to use this term, as curiosity. The trail took me beyond conventional scientific circles (total it had an occult connotation and was certainly nonscientific by our stan-rejection), religions ("It's the work of the devil"), parapsychology ("Inter-dards. Charles Tart, a psychologist friend, popularized the term "out-of-esting. Sorry, no data available"), and Eastern disciplines ("Come study at body experience" when we were working together in the sixties. In the our ashram in northern India for ten years"). This was chronicled in my past twenty years, it has become the accepted Western generic term for previous book, *Journeys Out of the Body*.

this particular state of being.

One thing is certain. The purpose of the previous book was many times Without any obvious reason, I began to "go" out of my body in the fall fulfilled. It brought thousands of letters from all parts of the world and of 1958. In the light of later historical events, it is important to state that among them many hundreds of people wrote their personal thanks for a no drugs or alcohol were involved. I was a nonuser of the former and an reassurance that they were not mentally deranged, were not so much alone infrequent imbiber of the latter.

after all with their “closet” secret experience that they could not explain, Several years ago, I attended a conference not too far from our former and, most important, that they were not necessarily candidates for the home in Westchester County, New York—the site of my first out-of-body psychiatric couch or mental hospital. That was the stated purpose of the experiences. As we drove by the house, I commented that the reason why original book: to help just one person avoid such needless incarceration.

they began was still obscure.

I personally am bemused at the changes in these twenty-five years. In A psychologist friend riding with me took one look at the house, turned, most academic and intellectual societies, it is now quite acceptable to talk and smiled. “The answer is easy. It’s the house. Take a good look at it.”

about OOBES. However, I’m sure that the great majority of people in our I stopped the car. The house looked the same. Green roof and stone.

culture are still unaware of this facet of their lives. In 1959 or 1960, I The new owner had maintained it nicely. I turned to my friend. “I don’t certainly would have derided the idea that I might give a talk on OOBES see anything different.”

there for a moment wondering what had happened. I felt my head and my Item: The money-pants pocket. For years, I have kept this as a closet shoulders and there was no pain, no mark, no bruise, nothing. I stood up, secret because no one believes it. I have shown it to my wife, Nancy, and picked up my books and papers, looked at the place from where I had she still is skeptical. It seems that if I leave a certain pair of pants hung in fallen, and tried to figure some answer. Something had cushioned my fall, the bedroom closet, it generates paper money. Real money, not new and but I certainly was not consciously aware of what it was.

crisp, usually fairly well worn. It is never a great amount; the maximum I Some months later in the middle of winter, a similar event took place. I have ever found in the pocket is eleven dollars. Usually there will be only was walking down the front steps, which had been reportedly cleaned after two, three, or four dollars. Time does not seem to be a factor. I can ignore a snow, slipped, and started to fall. This time I was not quite so surprised 10

FAR JOURNEYS

OLD LOCAL TRAFFIC

when I again landed very lightly. There have been only two such events, from aircraft. I waited eagerly for something more on the radio. My host and I don't think I will deliberately try to fall experimentally. Just another asked curiously what was so important. Needless to say, I didn't feel that I one of those "as yet" unexplained moments.

could tell him. A couple of minutes later the radio came to life loudly and Item: One of the more puzzling events took place as a result of a very clearly: "This is United 351 over Eaglehill at twelve thousand feet."

direct communication—or so it seemed. Early one morning in the mid-~~The~~ next day, after a long drive home, I went to the FAA facility at our seventies, about three o'clock to be exact, I went through my customary local airport and asked the FAA man where Eaglehill was. He replied lazy man's way of rolling out of my body. Almost immediately I was instantly that it was a holding point in a neighboring state, a radio marker accosted by a vaguely formed individual who gave me this very specific beacon. He showed it to me on the airways sectional map, and sure instruction:

enough, there it was—Eaglehill. There evidently was some type of small

"Mr. Monroe, be at Eaglehill at 7 A.M. on July fourth." Surprised, I village by that name, although it did not show on any of the road maps we asked for a repeat of the instruction. It came exactly the same: *"Mr.*

had.

Monroe, be at Eaglehill at 7 A.M. on July fourth."

This put a whole new prospect on the message. Therefore, on the Before I had a chance to ask why or what it was all about, the form afternoon of July 3,1 left home for the long drive over to Eaglehill. I drove faded and disappeared. I then rolled back into my body and sat up and into the small town nearest to the supposed site, checked into a local wrote it down very carefully.

motel, had a casual dinner, and went to bed early.

The next night when I performed the same act, almost immediately the At exactly seven the next morning, I drove into the crossroads called form was there again with the same message. It was very definite—almost Eaglehill. It consisted of two or three houses, a garage, and a store, all a command—and again the figure faded before I had a chance to query situated around a small country crossroads. Not a very impressive place, to further. I tried the third night to see if it replicated again, but there was say the least. It looked like it had not changed in the last thirty or forty no response. What was so impressive about it was that the instruction was years. I pulled over to the side and stopped the car. Several local citizens very clear. And it was repeated exactly the second night. Most important, sitting outside the garage looked at me curiously as I sat and waited.

“they” actually called me by name.

I waited for over an hour and nothing happened. No one approached This instruction elicited a great deal of curiosity from me and those of me. I didn’t feel anything except first excitement and then disappoint-my friends and family to whom I related it. We speculated in many ways ment. Finally, sometime after eight o’clock, under curious stares, I started about it but the big question was: “Where is Eaglehill?” It was about the car and drove up through Eaglehill and into the countryside beyond. I April when the instruction was given and there seemed to be plenty of drove about two miles further and there was nothing but farms. I returned time to find out what the message meant. But try as we might, we could to the crossroads and turned west and drove several miles. Again, nothing not find any place called Eaglehill. After a few weeks, I more or less forgot different, no one signaled me, nothing except country and farms. I turned about the idea.

around and drove east. It was all the same. I returned to my post at the An event changed all that. While visiting friends several hundred miles crossroads, sat in the car, and waited. When it got to be twelve o’clock, I from home, we were having dinner out on the patio of their house. My decided that it had all been an illusion, returned to the motel, checked host had a radio receiver that automatically scanned various frequencies out, and had lunch. It was either the wrong Eaglehill, or I understood it such as police, fire, and so on. We were

sitting there chatting when sud-wrong, misinterpreted, or it was all a hoax or a dream.

denly over the radio came someone saying “Eaglehill.” It jarred my atten-After much contemplation, I finally decided where my mistake was.

tion immediately. I excitedly asked my host what the radio was tuned to.

The invitation or request was not that I go to Eaglehill physically: it was He replied that it was the FAA aircraft channel for instructions to and that I be there in an out-of-body state. What the invitation did not take 12

I smiled and said, "I don't want the other five, Roy." And then I turned by the same person in a six-handed card game are about 5,780,000 to one.

over the three and four in the hole, making the straight flush in clubs.

How did it happen? I don't know. How did I know? Very simply, a He just looked at it and said, "Isn't that something!"

sureness. I suspect a lot of high rollers have made a lot of money on such On the very next hand, with Roy doing the dealing, the feeling I had dealings and lost also because the "knowing" was not right.

was still there, very strong, the "knowing." I didn't even look at my hole cards. Of the four cards dealt face up to me there was a five and seven of hearts. I knew. That's all I can tell you, I knew.

"Roy," I said, "you see that five and seven of hearts?" Roy nodded. He didn't have the aces this time. "Well," I said, "this last card you are going to deal is a six of hearts and that will make me a straight flush in hearts.

You see, I haven't seen my bottom cards yet, you notice?" He nodded, watching. Roy had been the dealer. The rest of the players were watching intently, expecting me to lose. Roy was an exceptional card player.

The last card was dealt to me face down, and before I could pick it up, Roy said, "I got another five says it's not the six of hearts. No, as a matter of fact, I'll make it ten." He shot a pack of chips forward.

"I don't want to take your money, Roy," I said, smiling.

"You are not taking it from me and I am not giving it to you," he said.

"Put it up."

I did.

"Now turn over the card," he demanded. I did, and it was the six of hearts. He looked at me with utter astonishment. He was doing the dealing. No trickery was at all possible in his frame of reference.

"Moreover," I said, "those two hole cards that I haven't looked at yet are the three and four of hearts."

Roy looked at me. "I have twenty that says that they aren't."

With utmost casualness I said, "I don't want to take your money, Roy,"

and turned over the two hole cards. They were the three and four of hearts.

Roy looked at the straight flush, the same one as before except in hearts.

"Sometimes you are about the luckiest fellow I ever met."

The others at the table agreed.

That particular run of "luck" was talked about for several months. The odds against two successive straight flushes of the same denomination held HEMI-SYNC ET AL.

during certain experiments with specific Explorers. Exactly why this took I smiled as I pushed the mike button and said, “Well, just relax a bit place—and still does so—we don’t know.

and I’ll get you out in a few minutes. Are you comfortable now?”

In the current Explorer group, only two remain from the original team.

“Oh yes,” she responded. “/ am fine.”

The tide of personal events has moved the others away from the area, I left her in the booth for some ten to fifteen minutes and watched as their lives visibly altered by the experience. The original material is still the gauges showed that she was relaxing into a light sleep. After a suitable being processed. Meanwhile, more is entering through sessions in our new time I awakened her and brought her out much refreshed. She was some-lab facility.

what bewildered by the experience and made a valiant attempt to stay Perhaps we need a few more doctors, with other credentials.

skeptical. I showed her the appointment schedule that usually called for an experimental session, then I played a recording of the actual “lifting out” techniques as described by the Explorer subject.

She finally left, a very puzzled and preoccupied individual.

Things like that are hard on belief systems when they happen to most people. The problem was that so many were happening to *us*. There were many suspenseful moments.

It should be noted here that reaching this state of trust and communication and/or association with these friendly entities and beings took hours and hours of preliminary contact, plus “third party” communication discussions. It did not happen overnight to the degree indicated here. A great mass of material provided through such beings had to do with information of a philosophic nature or suggestions and advice regarding the persona] well-being of the Explorers involved. In no case was any drug or any other medication used in any of our experiments.

Moreover, there are indications that a magnetic field is generated of a type with which our science is unfamiliar. One of the results of this is to set up magnetic fields in nearby electrical loops as well as audio cables.

Another is to affect nearby magnetic tape to such an extent that a “print-through” takes place from one layer of tape to another. The recording NEW

tions would provide answers. But for every answer, at least fifty new questions arise out of the Explorer Material.

Segue

Therefore, it became time to stop counting the trees and look at the forest instead.

And so we did.

Not being at all loath to borrow a word or term from one cultural context and apply it aptly here, “segue” is defined as a proper interlude of musical melodies and harmonies that moves from the conclusion of one composition to the introduction of another. “Proper” infers a transition that smoothly loses that previous theme or mood and sets the stage for what is to come.

So this is a segue. The movement from what we have labeled “local traffic,” i.e., events and activities that relate directly to here-now time—space, filled with much congestion, motivations, devious highways and byways, misconceptions, overwhelming emotions, detours, road repairs, confusing and conflicting signposts, inaccurate road maps, baits and lures both subtle and obnoxious—and dreams, ideas, learning, love ...

To “interstate,” where virtually all of the rules, patterns, illusions, and the rest of “local traffic,” with few exceptions, are nonexistent.

To begin the segue, here is the mix of premises and conclusions we had reached by mid-1984:

1. All humans move into the out-of-body state during sleep. Going, falling, dropping asleep is simply a process of moving out of phase with physical time-space. As the event takes place, the various stages of sleep are readily interpreted if viewed from this perspective. Thus deep or “delta” sleep represents the point where consciousness is completely detached from physical reality, and the physical body is operating on an autonomic basis with preprogrammed alert and alarm systems to recall consciousness if needed. The fact that most human consciousnesses do not or cannot recall or remember these nightly excursions is insufficient proof that they do not take place. A night of OD’ing on booze can provide the same degree of amnesia.

2. A form of dynamic energy yet to be identified and measured by main-

direct instant experience and/or immediate knowing transmitted from perceived, and the interpretations and conclusions that I gleaned from the one intelligent energy system and received by another. The content can experience.

Take this starting point, and draw any extrapolation from it, then unbecome only a two-digit number, or the actual reliving of an event not a part of understanding the limitations of our semi-intelligent species.

your own life patterns.

NVC implies a control of mental processes so alien to our present. Why did we evolve along our particular path so differently from the standards of being that I doubt that there is a single human or group of rest? I like the explanation which attributes it to the very rare characteristics—humans on our planet who have mastered the technique. If there are, they fit of the earth environment—we could see the sun and moon, planets are very quiet about it. On the other hand, if it were the case, they and stars. This presumes that most life-generating and -sustaining planets certainly would have had to develop some type of mental shielding to have thick cloud covers that blot out all of these. Their suns visually are no survive the cacophony of unorganized thinking that is so common here.

more than a haze of light. No more, nothing but blackness at night.

Before man can communicate (and associate) with intelligent species at Our species, able to see the physical universe from the beginning, took all levels of reality, he must become proficient at NVC. I am sure it must be the route of astronomy, gravity, electromagnetics, particle theory, quantum-mechanics if not amuse other intelligent species when we spend millions for quantum mechanics, etc., which we call our sciences.

warmth and love in the space of perhaps two or three seconds, no more.

If I were proficient at NVC and my son also was trained in the technique, I could pass along to him, in very short order, all of the education and experience that I have gathered that he might desire or that might be of use to him. It would not be the absorption of words simply received in serial form, but an instantaneous, or nearly so, transmission absorption of the entire event—including my emotional reaction, what my five senses

Part II

7. Surveys and

Schematics

The following is a deliberately free translation of nonverbal communication. To compound the rendering, most if not all represents the transposing of non-time-space events and ambience into replicas of conscious human physical experience. Thus a “humanizing” process is used extensively in the retelling—which may increase comprehension and simultaneously reduce accuracy.

To abet the method, a few specific words are utilized in a different context to provide a connotation not so totally unlike their common definition. You can’t report “he said” or “he walked” or “she smiled”—because it wasn’t that way, the physical equipment wasn’t available.

Instead, here are parts of the “replica” vocabulary: **Time-Space Illusion (TSI):** An anomaly among the “standard” energy systems, which includes the entire physical universe **M Band:** Part of energy spectrum commonly used for thought, not electromagnetic, electrical, magnetic, nucleonic, *etc.* *M Band noise* is caused by uncontrolled thought.

Ident: Mental name or “address,” i.e., energy pattern of item **Rote:** Thought ball

with the radiation that would get his attention. I released his foot, and he crawled back into the mass and was swallowed up in the movement. *I Point*

turned away sadly and stretched for my physical ident, and returned without incident.

From that point on, I had a new technique to control any surfacing sexual drive. All I need do is think of that wriggling, writhing, mindless pile of humanity. That does it.

The suspicion began where I thought I had a good perspective of the This episode was of the milder variety that may be encountered in the human experience. In retrospect, the whole thing may have been planned immediate postphysical areas. I soon discovered there was a pattern at that way all along.

work in my own guided tour through them—states of being I had previ-I had been moving in and out of OOB situations very blithely and ously passed through quickly to avoid confrontation. All of these forays calmly, always sure that my guiding total self knew the answers, would started while in the second body, before I could release it and move take care of anything and any problem as they arose. It had worked per-outward. I felt safe and secure with my higher self doing the driving.

fectly to date, and perhaps that was why the slight scent of suspicion The feeling was right. But not the reason.

began to form. However great my ego might think I was, I knew I wasn't *that* good.

Thus entered again one of my many questionable characteristics. I can't let a good thing alone and simply let it do; I have to find out why. In several succeeding OOB excursions, I tried to become aware of who *was* doing the driving and/or navigating. The contact was elusive in the beginning, no percept other than a gentle presence behind me, directing where I went. I turned around, but there was nothing—at the most a trace of a friendly presence. But it was there and it seemed definitely external.

I went back through my notes, all the way to the beginning. I was astounded that I had ignored what was so apparent. A hand helping me get out, a hand on my arm, a response to my anguished screams, and the more subtle clues apparent from my new perspective. I had called them helpers at the time and let it go at that. At the minimum, I had not turned my activities over to my "greater self," but to them, whoever

"they" were.

Thereafter, during active OOBs, I tried many times to communicate with these presences, singular or plural, to no avail. Correction: I thought I received no reply because no words were forthcoming, only pictures, sensations, and action. The change came about when I dimly began to realize I wasn't speaking their "language," as it were. Review of my early notes supported this, for the most part. Words and language, as we know 92

I plied. (*I guess so. See you.*)

I turned, dove inward, ident physical body, and reentered without incident. I sat up in bed, then got up, put on a bathrobe, and went out on the deck. It was a clear night, quiet and warm. I was still unsure as to how or why it happened, but I had no doubt as to the reality of the experience. If I encountered it and knew it, how many more thousands of human beings At this point, I began to accept my new role, whatever it was, and no living right at this time-point on earth also have gone through the same or longer pushed hard for further adventures or activities in the other energy similar pattern? If they have, to whom would they tell it? And the other systems I knew to exist. I did realize that in my sleep state much was training centers on planets circling those billions of stars, tied to us by an taking place which affected my conscious thought and action. I made no intelligent energy field common to all of us. Were they as unaware as we?

effort to investigate this, believing that it would take care of itself and was I felt very small, looking at the stars—and beyond. But not alone. Never supportive of the course I was following. If I had resumed the sleeper's alone.

classes, hopefully I was applying what I learned in my daily life.

Spaced through several years of time were periodic meetings-instruction sessions with the INSPEC. I still used this ident because I knew of no other appropriate one that was not tainted with cultural-philosophical connotations. The most recent INSPEC event precipitated the gathering of all of my notes on the interim adventures, and the pieces filled in the mosaic.

The following is no more than a survey of the salient or critical parts of the sequence. In the interests of brevity and a feeling of get-to-the-pointism, the usual preamble and closure as to going OOB and returning to the physical are

omitted except when highly relevant. Each of the following events began at the point in non-time-space near the edge of INSPEC

“territory,” with at least one of them present.

pened before but not this far on the edge, no need to abort and go back to *Friend*

physical ... don't move, no movement ... it's releasing me, easing back ...
totally different energy pattern, but intelligent, yes, must operate on M Band ...
certainly not ...

(Didn't intend to push you.) The form was open, vibrating. *(Your ident almost exactly like somebody else, my percept was he was you.)* I smoothed. *(That's O.K.)*

QUICK CUES

The form blanked. (*O.K.?*)

Open: Receptive

(There's no problem.)

Blank: Don't understand

Percept: Insight, intuition

The homing signal was still there, and I turned to move, when suddenly

CLICK!: Change consciousness

Plied: The way it is

the signal cut off. It was gone. This had rarely happened before, usually **Closed:**
Tune down or out

Rolled: Laughed

there was a reason. Almost instantly I got the percept. I turned back to **Curl:**
Organized energy

Rote: Thought bundle

the form. It was dulled and closed, receding.

Dulled: Lost interest

(Hey, wait a minute.)

Run the rote: Get details

Flickered: Uncertain

The form opened slightly, blanked, motionless.

Smooth: Get it together

Ident: Name/address

(Can I help you?)

TSI: Physical universe

Lighted: Idea, happy

The form vibrated slightly. *(You're human, or used to be?)* **Turn in:** Consider

M-Band: Thought spectrum

I smoothed. *(Well, yes, but not exactly the way you ...)* **Vibrate:** Show emotion

M-Band noise: Uncontrolled

(If you're human, you can't help, because you're addicted like all the thought

rest.) The form vibrated heavily. *(Takes more smarts than any human or anyone who's ever been human. They're contaminated.)* *R e a l t i m e : 3 : 0 5 A . M . . .*
. b o d y r e s t e d , r e l a x e d . . . s e n s e o f w a r m t h I had a percept of great loneliness. *(Try me.)*

... gentle insistent signal, familiar ... good enough, deep breath, ex-Small bits of rote drifted out of the form as it flickered half open. They hale, detach, unhook, down and out, then up ... free of physical, up had a different pattern and I couldn't put them together, too strange. 135

(Never mind. Human stuff again.)

CLICK!

(Give me a rote and I'll run it.)

(Not worth it. Now, these Seekers, they're different Near as I get it, they AA moved among a large mass of beings of all shapes, sizes, and pat-

come poking around here and they still got a physical human body over terns. The crowd was so large that he could not easily perceive the other there, alive and kicking.)

side, where it ended. None remotely resembled anyone he had known *(I didn't have a percept you can do that. I thought everybody came back back home in KT-95. He dulled, disappointed. Were they all waiting to be only after the physical body fell apart, wasn't operational.)* human?

(That's what I had until I got here as ED. Then I began to spot them.) (All of 'em.)

BB was lighting strongly, *(There he is!)*

AA spun his focus. A short, human-looking form leaned behind him.

Ed was gentle, warm. *(Go get him, tiger!)*

(What?)

BB blanked. *(Tiger?)*

The form vibrated. *(Ident Routine Entry Dispatcher. RED... fust (Go on!)
call me Red.)*

BB moved swiftly into the massive, flowing ring of vibrating forms. The *(Red?)*

M Band noise was nowhere near what he had expected, almost within *(Not to be confused with ... sorry, wrong department You must have tolerable levels. As he slipped through the edges of various radiation joined in when I was busy. Need to get a rote on you so I can try to place groups, he was quick to percept that many if not most had signal strength you properly. Roll it)*

equal to if not greater than his own. But it was different. It was not just AA opened and gave him the best rote he knew.

the noise, it was something different. Nothing like it in KT-95. Also, the Red lightened. *(KT-95, hey? Well, that's a new one for me. Haven't had forms obviously were aware of his passing ... short flashes of curiosity, a KT-95 since I've been here.)*

retracting to let him through, pleasant acknowledgment. Nothing like the *(I don't believe there ever has been,)* AA replied. *(No records, only side pattern he expected from his earlier percept.*

rote which doesn't mean anything.)

Then he was with AA. *(Some adventure, huh?)*

(And you came in on a TSI cruise, and you want to get the feel of it, AA blanked, then lighted brightly. (BB! What are you doing here!) huh? M Band noise got to

you, did it?)

(Came to get you, what else?)

(Well, no.) AA flickered. (Not exactly, you see, I ...) (You didn't have to do that.)

(Not important,) Red cut in. (fust makes it easier to get you processed, as (Well, you were supposed to return to the Station. What happened?) a matter of rote. Now, first, which is your preference, male or female? I can't AA flickered. (I was?)

guarantee your choice, but I like to match it up with the entry point when I (You sure were.)

can.)

AA flickered more deeply. (I don't know. It seemed, uh, easier this way.) AA blanked.

BB smoothed. (How was it?)

Red vibrated. (Oh, you don't know the difference. You are out of the AA lighted. (Astounding! I don't have anything to express it.) woods.)

(Start at the beginning.)

AA blanked further.

AA rolled brightly, and hit BB with a solid rote before he could close.

(That's a human expression which ... not important. I guess male or female doesn't make any difference in the long run, especially with you. So, any particular entry point desired?)

AA hesitated, then decided. (New York?)

136

FAR JOURNEYS

143

(Then you know what's happening.)

lem, too. I had the percept of BB in total blank and I must have receded almost instantaneously. I picked up the second, went back to physical, AA blanked. *(No, what?)*

took a deep breath, and looked for the problem. The dog was barking BB smoothed. *(AA, you're getting hooked, you're ...)* again to go outdoors.

The huge portal loomed ahead, a myriad of vibrations. AA was fading into the massive portal along with the others.

BB vibrated as strongly as he could. *(AA, no ... wait!)* With a strange wave, AA disappeared. BB dulled and closed, and moved away from the stream.

(Sorry, kid.) Ed came in gently. *(I didn't think you had a chance of a snowball in hell, but I had to let you try.)*

BB dulled. *(What happens now?)*

(If he/she follows the pattern, he/she will get more and more and more involved in the human experience, dropping down a ring each time until he/she is at the

bottom.)

BB flickered, still dulled. *(Then what?)*

Ed opened wide, carefully. *(They stay at the bottom and don't come back, or they begin to work their way back up. Most of 'em stay at the bottom.)*

BB dulled.

(Go on home, kid. Back to KT-9S.)

BB dulled and closed completely.

He slowly drifted out of the Station, flickering dimly. The haze was less, filled with occasional clean signals which did not have his ident; thus they did not attract or penetrate and so were ignored.

Then a faint percept did penetrate. BB popped open. A form was moving past him. He vibrated, stretched.

(AA! You did it! You broke out. How ...)

The form stopped, motionless. BB pulled back quickly. It was not AA.

CLICK!

BB opened wide. *(I got my idents crossed. That's why I hooked you.)* I folded the rote back in slowly. *(You have a problem, all right.)* Then there was a strong signal to return to the physical. I had a prob-

HEARSAY EVIDENCE

was great. He was smoothing. I put together an edited rote, short form, of BB turned inward, and I knew he was sorting out and scanning the rote my nonphysical action since 1958, leaving out the THEY sections, and I had given him. Things like sleep and wake-up needed new percepts on tossed it to him. He took it in, closed, was still, completely motionless.

his part. Also I knew what he was leading up to. But he put it off.

Then he opened wide, rolled, and flickered.

He opened, flickering. *(These three curls that came down the ... uh, I vibrated. (It's not that funny!)*

beam, you call it. Who were they?)

BB finally smoothed. *(I got an ident I can use for you! RAM the Bam!)* I plied. *(I don't know.)*

He was off again, flickering and rolling hard.

(They seemed to know you.)

(Just RAM will do.)

(Maybe they were from KT-95.)

He finally quieted down. (*Well, Ram, I get the percept that you were just BB rolled. (That is wild rote ... oh, joke fun. But you seemed to know a locked-in, hooked-on human until this thing came up. You had some them. You wanted them to take you with them. Why?) strong action after that! You didn't have much smarts.*) I flickered. (*I don't know.*)

I plied. (*I still don't have much.*)

(*And you sure do things the hard way.*)

(*Ever meet them again?*)

I rolled a little. (*Percept you can do any better?*) (*Not that I have a percept of.*)

BB flickered. (*Why, any dumb curl with only half his ident could ...*) BB turned inward again, then out. (*What about these curls that helped I cut in. (How about with no ident?) you when you needed it, or perceived you did. Who were they?*) BB blanked, then vibrated. (*No, you don't. You're not going to get me in I smoothed. (Probably from the upper rings. There's plenty of that going that game! I'm staying the way I am!)*)

on. Again, most humans don't have any percept on it except what they call I rolled and turned inward. I guess, from an external perspective, much dreams, uh, wild rote.)

of my response in my early OOB states would seem ludicrous. Now I can BB turned inward again, then opened, flickering. (*Well, I get the per-*

laugh at much of it myself. At least I know the human school game *can cept that there's too much wild rote floating around here.*) work. But there are many unknowns. What do you do after you graduate?

I blanked. (*Which in particular?*)

Where and how do I practice what I've learned?

(That rote on human compressed learning, human structure, the one you BB broke in. (Say, uh, RAM.)

tossed me.)

I opened. *(Yes?)*

I flickered. *(Yes?)*

BB flickered. *(I take it back. You're not really a dumb curl.)* BB went on. *(That's not wild?)*

I rolled. *(Thanks. I needed that.)*

(My percept is that it fits.)

BB blanked. *(You did?)*

(I got another rote, and when I overlay the two, one of them is certainly (That's a joke. Human fun.)

wild.)

He turned inward, then went on, opening. *(How did you get a percept and start running this leaving-your-body game?)* I blanked. *(What rote is that?)*

I flickered. *(I don't know. It just happened.) (The one we got in the TSI brochure, about all the places and things we (Other humans do it, too?)*

would be visiting. All about earth and humans, how it got started, what it's (I know at least some do. I've met them. Problem is, most go OOB

for ... all of that stuff.)

during sleep and they don't remember it when they wake up back in the I closed, then opened slowly. (They don't match up?) physical.)

(Here, get your own percept.) BB tossed a rote at me, and I took it curiously. And unfolded it.

versed the carbon-oxygen cycle. Yet all had a basic uniformity. Like the First Crop, they would reseed at regular intervals and terminate their life Someone, Somewhere (or both, in millions, or uncountable) requires, spans automatically. To avoid the uneven distribution of chemicals and likes, needs, values, collects, drinks, eats, or uses as a drug (*sic*) a substance radiation which had been prevalent in the First Crop, he immobilized the ident Loosh. (Electricity, oil, oxygen, gold, wheat, water, land, old coins, Second Crop. Each was designed to stay principally in its own section of uranium.) This is a rare substance in Somewhere, and those who possess the Garden. To this end, each was given firm tendrils which burrowed Loosh find it vital for whatever it is used for.

deep in the more dense chemical matter. Attached to this was a stem or Faced with this question of Supply and Demand (a universal law of trunk which helped elevate the upper portion upward for its share of Somewhere), Someone decided to produce it artificially, so to speak, needed radiation. The upper portion, broad, thin, and somewhat fragile, rather than search for it in its “natural” form. He decided to build a was designed as a transducer of carbon-oxygen compounds to and from Garden and grow Loosh.

the crop unit. As an added thought, brilliant color radiators accompanied In the natural state, Loosh was found to originate from a series of by small particle generators were mounted on each unit, usually near the vibrational actions in the carbon-oxygen cycle and the residue was Loosh top and symmetrically centered.

in varying degrees of purity. It occurred only during such action, and He set up circulating patterns in the gaseous envelope around the crop, secondarily during the reactive process. Prospectors from Somewhere principally to aid in the reseeded process. Later, he discovered that the ranged far and wide in search of Loosh sources and new discoveries were same turbulent effect served as a means of harvesting the Loosh. If the hailed with much enthusiasm and reward.

turbulence were violent enough, the Crop would be blown down, the life So it was that Someone and his Garden changed all this. Far off, in a span terminated, and the Loosh would discharge. This was especially use-remote area, he set to work on his experiment. First, he created a proper ful when an immediate Loosh supply was desired at a particular point environment for the carbon-oxygen cycle, where it would flourish. He rather than at Harvest Time.

created a Balance with much care, so that proper radiation and other Despite all of this, the Second Crop was most unsatisfactory. While it nourishment would be in continuous supply.

was true that a much greater quantity was attained, the unrefined Loosh He then tried his First Crop, which actually did produce Loosh, but produced was of such low grade that it was scarcely worth the effort. In only in small quantities and of comparatively low grade, not significant addition, the growth period was now too long and no increase in quality enough to take back to the heart of Somewhere. The problem was two-resulted. Some vital element was missing.

fold. The life period was too short and the crop units themselves were too Someone hovered over his Garden for a long period in study before he minute. This brought about limits in quality and quantity, as the crop had attempted the Third Crop. It was indeed a challenge. True, he was par-no time to generate Loosh in such close tolerances. Moreover, the Loosh tially successful. He had grown Loosh. Yet the product of his efforts fell far could be harvested only at the

moment of termination of the life span, not short of the wild, uncultivated variety.

one moment before.

It was inevitable that he perceived the answer. The Third Crop was His Second Crop was no better, if as good. He changed the environ-living proof of this Truth. The original carbon-oxygen cycle must be inment to another part of the Garden, where the density was gaseous rather cluded. Mobility must be restored. Both factors had shown great promise than liquid and the higher-density chemicals formed a solid base and thus in high-grade Loosh production. If size could be added to this, much were still available. He planted numberless units in many varieties in a could be accomplished.

new form, with a great increase in size, some many thousands of times With this plan in the forefront, Someone removed various sample units larger and more complex than the simple unicellular First Crop. He refrom the First Crop, which was still thriving in the liquid portion of the 164

165

Garden. He modified them to exist and grow in the gaseous area. He Crop. He knew now that the Third Crop Mobiles were too large and too adapted them first to take nourishment from the Second Crop, which he long in life span to be ultimately practical. If grown in large numbers, the permitted to abound for this very purpose. Thus it was that the first of the entire Garden would have to be expanded and enlarged. There was not Mobiles, the Third Crop, came into being. The Mobiles took nourish-space enough to grow such massive single units and the proportionate ment from the Second Crop, thus ending its life span and producing low-leafy Second Crops to support them. Also, he reasoned correctly

that grade Loosh. When each huge Mobile terminated its own life span, additional rapid and increased mobility would expand the Conflict factor, with tional Loosh was produced. The quantity was massive, but the frequency a resultant higher Loosh output.

pattern of the Loosh residue still left much to be desired.

In one single motion, Someone terminated the life spans of all the It was by accident that Someone came upon the Prime Catalyst as lumbering Third Crop Mobiles. Going back to the First Crop in the regards Loosh production. The monstrous and slow-moving Mobiles had a liquid area, he modified and expanded them into a multitude of shapes life span far out of proportion to their nourishment input. The growth and sizes, gave them complex multicellular structures of high mobility. He life-termination process was of such length that soon the Mobiles would designed into them a pattern of balance. There were those that ingested a all but decimate the Second Crop. The entire Garden would be out of Second Crop type of carbon-cycle unit (basically immobile) as an energy balance, and there would be no Loosh production whatsoever. Both the source. There were others, very highly mobile, who required for energy the Second and Third Crop faced extinction.

ingestion of other mobile Modified First Crop units.

As the Second Crop grew scarce, energy needs of the Mobiles became The completed circuit operated quite satisfactorily. The stationary Sec-acute. Often two Mobiles would seek to ingest the identical Second Crop ond Crop modification in the liquid environment flourished. Small, highly unit. This created Conflict, which resulted in physical struggle among two active liquid-breathing Mobiles took nourishment, “ate” the Second Crop or more of the ungainly Mobiles.

modification. Larger and/or other active Mobiles consumed for energy Someone observed these struggles, at first bemused with the problem, the smaller “plant eaters.” When any Mobile grew too large and slow, it then with great interest. As the struggles ensued, the Mobiles were ema-became an easy target for the smaller Mobiles, who attacked in voracious nating Loosh! Not in fractional

amounts, but in sizable, usable quantities numbers. The chemical residue from these ingestive actions settled to the and of a much higher purity.

bottom of the liquid medium and so provided new nourishment for the He quickly put the theory to the test. He removed another unit of First Stationaries (Modified Second Crop), completing the circuit. The result Crop from the liquid Garden area, redesigned it for the gaseous environ—was a steady flow of Loosh—from the life-span termination of the Stationment—but with one significant change. The new Mobile would be some-aries, from the intense conflict among the Mobiles to avoid ingestion, and what smaller, but would require the ingestion of other Mobiles for nourishment. This would solve the problem of overpopulation of Mobiles, and the inevitable product of such conflicts.

at the same time would create good quantities of usable Loosh during each Turning to another portion of his Garden—the gaseous area with a conflict-struggle, plus a bonus if the new class of Mobile terminated the dense-compound base—Someone applied the same techniques with even life span of the other. Someone would be able to transmit to Somewhere more advanced improvements. He added many varieties of Stationaries practical amounts of reasonably pure Loosh.

(original Second Crop) to provide sufficient and diverse nourishment for Thus it was that the Rule of the Prime Catalyst came into being.

fied of approaching death from illness or injury.

Not knowing, she doesn’t care.

Something *was* dying in me. I had long realized that the God of my childhood did not exist, at least not in the form and substance envisioned by my enculturation. However, I had deeply accepted the concept of creator and created—I had but to look around me at the elaborate and intricate order of design, of the symbiosis that made the whole process operate, the trees that grew plumb-line straight up if given the chance, that provided me and other oxygen breathers with what we needed while we fed to them unknowingly for a long period our waste products, which they needed to exist ... the balance of the entire planet, whose outer filtering bands of energy permitted just the proper quantity and quality of sunlight so critical to biologic growth ... and of course the food chain.

The loosh rote explained everything very neatly. Most important, it explained the purpose, the reason for it all, the why of it. This factor had long eluded me. The loosh answer was simple and obvious. The reason was there, in very prosaic fashion. We were indeed producing Something of Value. Loosh. If one finally was able to get past the emotional barriers involved, it became hard even then to find holes in the general concept.

An explanation of total human behavior and history.

That left the INSPECS.

Were they the gardeners, the loosh collectors, or the overseers? The question tantalized and tortured me for many weeks before I finally decided I must find

out one way or another.

On a particular night, after great difficulty in getting two cycles of sleep, I awoke with a start and lay quietly in bed. Evidently my fear of 174

When you have progressed, we can guide you to one of the destinations so the soles of my feet, the even breathing of Nancy sleeping beside me—

you can observe the results.)

that I felt the wetness of my cheeks and a few remaining tears in my eyes.

My percept was not strong enough to bring any flicker whatsoever as to And I remembered. Not much, but I remembered! I sat up in bed, what exposure to the full force of such rays might be. But my human wanting to jump up and shout in incomprehensible joy. Steamboat raised curiosity wouldn't let the basic question go unanswered, now that I had his head and looked at me curiously, then dropped back. My wife shifted smoothed somewhat.

position as I sat up, then gradually resumed her even breathing rhythm. I (*It was created. It was always there, we have no percept of a beginning.*

would not wake her, she needed her rest and recharge.

Are you ready to return now?)

I lay back and remembered. Sometime before dawn, I, too, fell asleep.

I turned inward and closed tightly.

CLICK!

... We were back again in familiar blackness, only now it seemed empty and sterile, but the INSPEC energy was still beside me ... now I would have to put together a new ident for them, if they could hold up so calmly under . . .

(INSPEC will serve as well as any other.)

But I couldn't let it alone. As shaken as I was, I knew I had to ask, because I had known they were greater, but how much greater now might be a depth ...

(We are created, just as you are created. More than that, it is important that you obtain from your own percept. In your own— how do you put it? —

time, you will find the reason for this.)

Suddenly, I felt a strong, urgent signal pulling at the back of me. I resisted at first, not wanting to leave, but the signal was persistent. With the warm pattern of understanding from my INSPEC friend, I turned and followed the signal. Instantly, I was hovering over my physical body.

There below me was my second body. I slid into it easily, then into the physical. My right arm was tingling due to lack of circulation. I evidently had been lying on it at an angle. I flexed the arm several times, musing as I had so many times before: Suppose there were no signal to return, how long would I stay away, would I never return? It was then, lying there in the darkness, listening to the whippoorwill and the night crickets outside, the soft earth-scented breeze flowing in through the open window, feeling the hot warmth of our little dog

Steamboat sleeping contentedly against ONE EASY LESSON

183

14. One Easy Lesson

Even then, you had trouble with his ident. I guarantee you that's just the small part of it, he was only on his way in, he was just getting started.) He turned inward and closed. I suddenly got the percept that I had done it again. What would I do with him? He wasn't a stray cat or dog I could take back, feed, and find a home for. It was ludicrous. Fix him up *Time: 3:40 A.M...* . awake, alert, rested, relaxed ... unhooked easily with a human body? How would I do *that*? And he certainly wasn't going from the physical, slid out of the second immediately, and waited for a to join the line and go human via the Entry Station. Can you learn to signal. There was none, so I let go and let the total self take over. There swim without getting in the water and getting wet?

was the usual blur of movement, not too extensive, and I had the ident of I tried to ease out of it gracefully. *(Maybe it's best that you pull a skip BB close by me. My percept of him was totally different. He was tightly and go back to KT-95, let it go at that.)*

closed. And dulled. The thin outer haze of the Intermediate Area made BB opened slightly. *(I did. Went and came back.)* him even less distinguishable.

I waited. I wasn't going to get in deeper if I could help it. I knew he I tried to smooth casually. *(Hey, old buddy, what's up?)* would go on and he did.

BB opened slightly. *(Oh, hello, RAM.) (I had it you (There was a hole and the hole was empty. You ever been like that?) would he pulling skips back to KT-95.)* He dulled.

I plied. *(Yeah, I've been there. It'll stay empty because it's designed for (Sure.)*

one curl. No other will fit in.)

I smoothed very gently. (*Anything I can do for you?*) (*No ... no.*) He (*AA was one smart curl, you can believe it. Too smart for his own good.*

started to close. (*I'm just hanging around.*) He had the set of someone *Look what it got him.*)

who had lost his best friend, which was exactly the case from his I plied again. (*It happens.*)

perspective, and partially so from another— partially in that the same I was about to turn and disengage as carefully as I could, but I was too AA, when he finally emerged, would be the fundamental, with the late. I had the strong percept that he would come to some solution and it unique variegation learned from the in-human experience permanently would involve me. I was too right.

interwoven and overlaid throughout the being that he had become. It He had lighted very brightly. (*You can do it!*) could be construed as a loss if BB did not accept the change or (*Do what?*)

expected only the stasis of KT-95 that had been AA. I tried another (*Feed me rotes about humans. Then I'd be ready for him.*) approach. (*Well, you just can't stand here forever.*) BB blanked.

I flickered. (*I wouldn't know where to start.*) (*Forever? What's that?*) I flickered. (*It's, uh ... human expression.*) He (*Then show me how it works.*)

vibrated. (*I want nothing to do with that human action!*) I put it to him (*How am I going to do that? You 'd have to be in-human ...*) hard and straight. (*You're going to have to get some kind of rote about* (*No, no, I wouldn't,*) BB cut in quickly. (*You move around without a human. If you don % you won't know your friend AA when he comes out.*

physical body.)

You won't have any ident on him whatsoever.) BB vibrated. (*Sure, I will!*

(Well, yes, but ...)

You don't lose things like that!) (It won't be the same. Pick up your rote (You and me, we had a hook right from the start, RAM. Like old friends.

when you tried to pull him out.

I got a solid ident on you. So you be my Tour Guide, quick and short. How about it?)

I smoothed. (What's it like being human in one easy lesson?) He lighted more. (That's it, that's it!)

184

waves to hit the rocks accurately, I tell you. Hey, Robert, you like sunsets.

I smoothed. *(No, Charlie made it.)*

Watch this one.)

BB blanked. *(Charlie made it!)*

We turned and looked out over the ocean. Slowly, the light blue sky *(He likes to be reminded of his favorite physical place, so he made a* darkened, and flares of red, orange, and yellow melded together on the *copy.)*

horizon. Layers of clouds appeared which added perspective and texture to *(He can do that?)*

the scene. The edges of the clouds took on rose and mauve hues. It *(It's like a rote, almost.)*

reminded me of Oahu in Hawaii.

The door of the cabin opened, and Charlie came out. He was his usual Charlie turned to me. *(How's that for a first draft?)* short, round-bodied, round-faced self and wearing his usual plaid shirt. His I explained to BB. *(Charlie was an electronics engineer in his last physi-*

hair was dark and straight this time instead of his usual tight blond curls.

cal life.)

He approached and we shook hands. *(Well, Robert, I see you got out (I thought I was pretty good,)* Charlie added. *(That was nothing com-again.)*

pared to what you can do here. What's your field, BB? You work with Robert?)

(Hi, Charlie. What happened to your hair?)

BB flickered. *(I'm from KT-95.)*

Charlie flickered. *(I, uh, got a new friend. She likes it straight and brown,* Charlie looked puzzled. *(KT-95? New one on me. Where's the company so I changed it. She's in the cabin. Want to meet her?) located?)*

(We just stopped by for a minute. Next time maybe.) I decided to give it to him straight. *(He's not from earth, Charlie. He* He looked in BB's direction. *(You got somebody with you?) isn't even human.)*

I smoothed. *(Yeah, a friend.)*

He looked taken aback, but only for a moment. *(Now, come on, you're* He stared intently. *(I can just barely see the edges of something.)* *not going to start that kind of talk again!)*

(Say hello to BB.)

I laughed. *(He's for real, Charlie.)*

Charlie looked dubious. *(I can't see you, but hello, BB. Welcome to* He turned to where he perceived BB stood. *(Robert has been feeding Fantasy Land.)*

me all these wild ideas about other worlds, energy fields we know nothing BB

flickered. (*Uh, hello, Charlie.*)

about, that type of thing. I can go along with him as to possible intelligent Surprise crossed Charlie's face. (I heard him! I heard him but I can't see life on other planets somewhere beyond our solar system, but that's not him!)

what he means. Human life, even operating the way I am now, I can handle BB rolled a little. (I get you fine, Charlie!)

that, too. So he got you to help him pull a fast one on Charlie. You put yourself a little out of sync to make yourself look hazy, and whammo. Robert has himself a super being.

BB flickered. (*Now, Charlie, I didn't . . .*)

(*O.K., I can go along with a gag as good as the next one.*) He chuckled. (*Where did you say you're from?*)

(*KT-95, Charlie.*) BB smoothed. (*It's different from here.*)

(*Sure, I bet it is.*) He laughed. (*What do you do there? I mean you, personally.*)

(*I, uh . . . play games.*)

(*What kind of games?*)

(*They're hard to explain, but I can show you one.*)

Charlie smiled. (*O.K., show me. I'm a Missouri boy.*)

I cut in. (*I don't think you should . . .*) BB. *We, uh, we don't have enough time.*

Charlie laughed hard. (*Had to bail him out, huh, Robert? You should have coached him more. I suppose, BB, you've come to earth to save us humans from ourselves, stop the nukes from going off or some such thing.*)

BB blinked. (*No, no. We were on this tour of TSI and . . .*)

(*Just visiting, that it?*)

(*That's all. Then . . .*)

(*Just where is this KT-95 you say you came from?*)

BB flickered. (*Uh, just pull a couple of long skips that way.*)

Charlie turned to me, grinning. (*Nice try, Robert. I appreciate all the trouble you and BB took to dream it up. Bring me a little hard data and I'll believe you.*)

I smiled. (*I'll keep trying. We have to leave now. Thanks for your hospitality. I liked your sunset.*)

Charlie and I shook hands, and he turned to BB. (*Come back and visit, BB. You don't have to wait for Robert to bring you.*)

BB vibrated. (*I don't?*)

(*Come whenever you feel like it. Next time you won't have to detune. Then I can see you better.*)

(*By the way,*) I put in, (*you decided yet about your next physical life?*)

He shrugged. (*I'm still thinking about it. I'm in no hurry.*)

(*That's good. Be selective next time.*)

(*That I will.*)

I smoothed. (*Take care, Charlie.*)

We lifted outward, and soon we were back in the haze, and I could tell from the change in texture when we passed the null point. From here on out, things would change rapidly. The question was, where to drop in next? BB was tight beside me, and I knew he was trying to sort out the solid shots of rote he was receiving. I tried to get a percept of the impact on him, but he was closed too tightly. But I didn't really need a percept. Charlie had impressed him. Here was another human being—albeit without a physical body for the moment—that he could relate to easily. After the mess in the lower rings, here was a Charlie who seemed perfectly normal, who knew how to do things—play?—in ways that were new and exciting to BB, and a being who had a sense of humor much as he did. Only one small problem. Charlie wouldn't believe BB existed if he had the real rote.

I decided we were deep enough into the outer ring, so without an ident I pulled to an easy stop. The haze was less dense, and the shape of buildings, irregularly spaced, began to take form—each a suitable distance from another, each different in design either extremely or slightly. Many seemed to be constructed of stone, most were equipped with spires, steeples, domes, or towers in various configurations, some had elaborate stained-glass circular windows. We moved down near the front of the nearest building. As we did, a woman emerged from the front door and descended the wide steps. When she reached the last step, she looked up and stopped short. There was no fear in her eyes, just uncertainty.

I decided to set her straight. (*We don't bite.*)

She responded immediately. (*I didn't expect you to. I was trying to decide where to refer you. We have so many committees. You don't act like a newcomer.*)

I smiled. (*We're just visiting.*)

(*Our minister says there is no such person as a visitor here,*) she replied confidently. (*You wouldn't have found us if you didn't have our faith. It's really all right to be a newcomer. I'll take you to Thelma. She's in charge of the welcoming committee.*)

I smiled. (*No, thanks just the same, we're only passing through.*)

She looked puzzled. (*You keep using "we." Do you think you're more*

percept missed these fine edges.)

BB Bickered. *(Uh, hello.)*

BB flickered. *(There's one other thing.)*

It was no surprise that Bill was aware of BB and the whole sequence of *(Yes?)*

events. I sometimes get the dim percept that my entire adventure, includ-

(This other part that messes up the M Band so badly ... the scratchy ing this one, had been neatly planned from the beginning. Thus, I let Bill stuff. RAM called it emotion. I don't have the least percept of that. He puts and BB get it together and they did.

it I have to be human.)

BB began it. *(You're human like RAM here?)*

(Emotion is the points, the score.)

Bill rolled a little. *(I have a solid mass of human rote, BB. I've been BB blanked, and I waited for Bill to lay this one out. I would like to through the mill, as it were. But at this point, I don't have a physical body know, too.*

as Bob does.)

Bill went on. *(Emotion is what makes the game seem so wild, but it is (You want a rote from me? What I am and that stuff?) the game, the one game in which all other games are played. The others (That's not necessary. I have a fine percept of you, your friend, uh, AA, feed score to the big game in the form of emotional*

energy. The big game is and KT-95. What I would like is your percept of the human experience to control and develop this emotional energy to its most effective condition, with your one easy lesson.)

which is vaguely set by us humans as love, until we graduate. The more we BB flickered. (It's uh, not too solid. You sure you want it?) score, the more fun it becomes. Most of us here— where you are now— we Bill smoothed. (Just as it is.)

spend our energy going in to help other humans, however and wherever we (Yeh. Well, uh ... it's the wildest bunch of games inside of games can, to improve their score— and so have more fun.)

... With, uh, rules on top of rules that get so mixed up you don't have BB turned inward and closed. Finally he opened again. (Uh, Bill?) any percept at all of which game you're playing. Then they get so busy (Yes, BB?)

playing so many games they forget it is a game, the whole thing. Even why BB flickered. (I don't have any percept of this emotion and love energy they're playing it and how they got in it to start.) stuff. Not a single skim.)

(That is very well put, BB.)

Bill vibrated gently. (Of course you do.)

(Why, I could take the rote I got, just what I got, the real rote, go back to BB blanked. (I do?)

KT-95, and feed it out one after another, each part as a game, and keep (Why are you here now? Why did you take the trouble to come back those curls back there skipping so fast they would spin out.) from KT-95? Why have you been ... hanging around? Why did you (I'm sure you could.)

want to go through this one easy lesson with Bob? Why not just go back to BB flickered. (But there's some missing parts ... and, uh, the game KT-95 and play some games?)

isn't any game without it.)

BB blanked completely, then slowly turned inward and closed tightly.

Bill was very smooth. *(Such as ...)*

There wasn't the slightest radiation or movement in him that I could *(How do they keep score! Who does the keeping!)* perceive. Bill reached out gently, but BB gave no response. I had never

been present when anything remotely like this had happened to anyone 15.
Promised

nonphysical, except those in the stunned-out ring right after physical death—and I hadn't ever watched the start of the condition in that case. I *Plan*

began to vibrate.

Bill opened gently. *(You 'd better go back now. We'll take care of him.)* I vibrated more. *(Will he be all right?)*

(It's a big rote he's absorbing. The fact that he's never been human makes it ... different. He'll be fine.)

Time: 2:32 A.M... . awakened with full physical awareness, felt the fal began to think that I never should have taken BB on the tour, when miliar INSPEC signal,

soft, not insistent, but there ... feeling of relaxed Bill cut in. *(Bob, I was the one who gave him the rote that put him down.*

confidence ... went into short focusing routine, then unhooked from *He's in the equivalent of what we used to call shock. Head back now, your the physical*, then the second ... much like doing two slow half-rolls in *energy is weakening. We will take good care of BB. He will recover.*) an airplane ... homed in on the ident, and with very little sense of I turned reluctantly, did a half-roll, and dove down, following the ident movement, I was with them at our usual point of meeting. I knew now of my physical body. I was relaxed and sure because there was no better that I would never go beyond this point again, into where they are, until I help for BB than Bill and his friends, except perhaps the INSPECS—and had fully released my physical body. Even with the compelling attraction the line between the two was very, very thin. I picked up the second and that the knowledge of it evoked, I believed I could handle it, at least for reentered the physical without incident. Everything was calm and normal, now.

except that I forgot to check the clock.

(We enjoy your human terms. Handle, as you use it, does not imply a I kept thinking about the thin line in the weeks and months that point of grasp for your physical appendage, but capability to act properly.

followed.

Therefore we do learn from you.)

I still found it hard to imagine their learning anything of significant value from me, but if THEY felt that way, fine.

(We learn much of importance from and through you, Ashaneen.) I still remember the first time I became aware that I didn't have to form questions, how disconcerting it was that THEY perceived every thought that I had, including questions before I got a chance to ask. It all smoothed out when I accepted the fact that whatever I thought, believed, responded to emotionally, was just being human and no judgment was passed therefrom. What a joyous freedom!

(Yet you would not know of it as a freedom if you had not experienced the repression.)

Yes, the comparative factor seems always to apply. Without it, perhaps there can be no change or at least the awareness.

(At this point, we believe you are ready for another awareness. You may now appreciate the prospect of what you are attempting to perform in your present time. It is not to state that you alone may bring into earth reality 206

PROMISED PLAN

215

I swallowed, wondering where the corn went when I did so. It didn't I got a clean, clear percept. (*The rest of the world, the earth, is it all like matter, so I smoothed. (All right, you've convinced me. What about no this?)*

roads, no transportation? Suppose we wanted to go to Japan. That's not (It has been restored to its original ecological balance, the way it was within walking distance.)

before humans upset it so severely. It's all back together again, every tree, BB grinned. (Why, we just pull a skip, that's all. Short version, of course.

every plant, every animal ... all of it.)

Why Japan?)

(Plus a few improvements,) BB put in.

(I noticed some very unusual patterns of growing things there when we (But it's not all laid out in huge gardens such as this.) I focused on the woman.

came in.)

(Only a small part,) she came back. (The rest is made up of forests, The woman smiled. (It's very lovely, isn't it?) woodlands, pastures, and prairies. Even the desert areas have been re-

(First stop, Japan.) BB turned toward the woods, and the woman fol-

stored.)

lowed. (We'll be right back.)

My percept had been quite clear. Humans had taken over Mother I watched as they disappeared into the grove of oaks. I stood there Nature's work—with a few improvements. I didn't need to ask the hows of waiting, mulling over the strange mixture of physical and other energies it. The rote of the woman converting dirt into an ear of fresh sweet corn that was now earth life. I found I was unable to determine where one said it all. If a human could do that ... I had to complete it. I was sure of began and the other left off. There was no longer a sharp dividing line.

the answer before I asked.

Was it all like this?

(Suppose we wanted to walk around down there. I mean in a physical (All ready?) I turned and there was BB and the woman standing beside body.) I smoothed carefully. (How could we do it?) me. They seemed different, lighter. (We had to drop off the bodies.) The woman vibrated. (I'm sure there are any number of bodies under I suddenly remembered. (No tricks, BB.)

those beautiful cherry blossoms.)

BB rolled. (No chance. She's handling the ident. You and I just play I pressed. (We each could take over one, just like that?) follow-the-leader after her.)

(Yes, of course.)

I focused intently on BB, and stretched.

I had to know. *(Suppose they all were already occupied ... so to speak.)*

CLICK!

BB couldn't stay out of it. *(We 'd make some new ones. Doesn't take long. You want to go down?)*

We were hovering over a rolling landscape, at about ten thousand feet.

I flickered. *(No, no, not yet anyway. But what about the physical bodies Directly below us was what seemed to be the center of a lotus blossom, you left under the oak trees? Can just anyone occupy those if they want to?)* BB rolled. *(Sure, why not?)*

the outermost petals in magnificent glowing colors spreading out in all directions for five or six miles. Beyond these were descending tones of Why not? That took

some fast adjustment. Then I pulled out the rote green, from the very light of a fresh new leaf to the rich dark of the lower from back when, where others *had* occupied the physical bodies of our volunteers in the laboratory, communicated verbally, activated other por-tropical rain forest. She and BB were beside me.

tions of said body, including playing the piano ... all without any wear and The woman vibrated. (*This is one of the nicest.*) tear, or concern ... why not!

I could see why. I opened. (*Who did this?*)

The woman was smoothed at BB. (*I don't get the percept he's ready.*) (*A group who wanted the area to give a percept of the beauty that began here. It was in existence when I came. Now others just take care of it.*) 216

now more powerful attraction of the field, and the Unit settles into the field itself, to become a part of it.

To launch and achieve escape velocity, the Unit must (1) remove the adhering particles that created the problem while retaining such information/data/experience so as to bring back Something of Value; (2) develop and store sufficient energy to achieve both launch and escape velocity, which infers a far greater amount than that available at the point of original entry under typical conditions, plus additional reserves to compensate for the extra payload on board.

The solution is made complex by the lack of efficient methods for proper detoxification and removal of adhered particles, as well as the availability of only the most primitive techniques for proper energy distillation and accumulation. Therefore, at best, extrication is a long and arduous process. The key is to begin first with ballistic trajectories, followed by elliptical orbiting, ever increasing the perigee until escape velocity is reached.

Thereafter, the Unit can return to its original base with its payload—or, with its increased energy, move on to greater exploration.

The foregoing is at best a generalization, specific only in the broad classifications indicated. It is a simplification of a very complex and intricate pattern of movements perceived from an external perspective. It is deliberately devoid of as much humanism as is possible by a human, in the belief that such starkness will gather the attention and understanding. Another way to describe the process in contemporary terms: The Unit latent in the left-brain modality. However, the problem still remains—the (the original you?) is attracted and drawn by the human earth energy field.

need to express in a form remotely acceptable to in-human consciousness.

The Unit decided to make a close-in pass-by through the field to obtain data and information. This reduces velocity in the Unit to a degree greater. This, then, is a flow sheet of where the action is in which all of us are than that calculated to occur from friction, due to the unexpected adher-vitally involved. It could be

identified as the Earth-Human Energy Envience factor of the particles within the field. The reduction is so great as to ron, Human Time-Space Illusion. It is a summary based upon several fall below escape velocity, and the Unit moves inexorably into an elliptical hundred individual explorations, most of which are beyond literal transla-orbit. At each apogee of the orbit, the Unit passes through the human tion. To chronicle each individually would consume an entire volume in earth energy field again and gathers additional adhering particles there-itself, if indeed it were possible. Therefore, this baseline will have to serve from, causing greater reduction in velocity—which in turn lowers the for the moment. We might get lost, with or without it, but our chances perigee of the orbit. Finally, the orbit breaks down and succumbs to the are better with it.

I. The Out-of-Body Experience: Most

Frequently Asked Questions and Answers

See you in Home—or along the way.

QUESTION: HOW DO YOU KNOW IT ISN'T JUST A TYPE OF DREAMING?

Most individuals do dismiss the experience when they encounter it as nothing more than a vivid dream. At most, it may be categorized by some as what is identified as a “lucid” dream. In the latter, the dreamer is apparently aware that he is dreaming, and can control the content of his dream, even to the point of changing the event, the participants, and the outcome.

In the OOBEx, the individual is near-totally conscious, as our civilization defines the state. Most if not all of your physical sensory perception is replicated. You can

“see,” “hear,” and “touch”—the weakest seem to be smell and taste. Your perspective is from a position outside your physical body, near or distant. In a near state, it is usually from a location impossible for you to “be” with your physical body, such as floating against the ceiling. In a far location, it could be in Paris when you know you are in New York physically. You can observe events taking place, but you cannot change or significantly affect them. You can verify the authenticity of such events subsequently if you so desire. You cannot participate to any major degree in this physical activity because you are not “physical.” It is the extreme reality of the OBE that sets it apart from a dream. It is as “real” as any physical life experience.

QUESTION: CAN ANYONE GO OUT OF BODY?

Several studies made during the past ten years indicate that some 25 percent of adult humans remember having at least one spontaneous OOB. Many were unaware of what had happened to them until the phenomenon was described to them. As stated earlier, we take the position that everyone goes into the OOB

state during the delta or deep-sleep state, as a natural process and in varying degrees. Therefore, one step may be to begin to remember the OOB patterns you have or are performing each night when you sleep. Further, after specific psychological and/or philosophic preparation, we believe that anyone can indeed consciously move into OOB states.

QUESTION: WILL DELIBERATELY GOING OOB HURT YOU?

COULD YOU DIE FROM IT?

After twenty-five years of investigation as well as personal exploration, there is no evidence to support either possibility. There is no doubt as to the emotional impact upon discovery of the reality of the OOB state. The major adjustment of

Surveys of OBE

Method

Few surveys of the incidence of OBEs exist; the earliest was by Hart in 1954.¹⁴

On February 15, 1976, one of the investigators (SWT), in an interview with a He asked 155 students whether they had ever had an OBE. 27.17c of them said national periodical (circulation 15 million on the North American continent), that they had, most of them having had more than one experience. This result is solicited letters from people who thought they might have had an out-of-body not inconsistent with the results of several later surveys. In 1968 Green¹⁵ reports experience. Of about 1,500 responses, 700 subjects reported experiences in which the results of asking 380 Oxford undergraduates: “Have you ever had an

experi- they thought their consciousness was separated from the physical body. About one once in which you felt that you were out of your body?" Of these 34% replied year after the interview two multiscale questionnaires (Profile of Out-of-Body Experiences, POBE, and Profile of Adaptation to Life, PAL) were sent to the individ-affirmatively. Palmer and Dennis in 1975¹⁶ published the first survey using a uals and 420 people returned valid questionnaires. 339 reported OBE experiences, *randomly* selected group of 1,000 students and townspeople in a small town in while 81 people did not have such experiences, but expressed a strong interest in Virginia. 25% of the students and 14% of the townspeople reported having had learning more about them, and for the purposes of this study were used as a an OBE. A rather original approach to the study of OBEs was that of Shiels,¹⁷

comparison group, controlling for high interest in esoteric phenomena.

who collected data on belief in OBEs from nearly 70 non-Western cultures. De- On the POBE questionnaire, items relating to phenomenology were selected spite cultural differences the beliefs were strikingly similar. Shiels felt that this was from the following sources: reports of near-death experiences, mystical religious indirect evidence for an account of a *genuine* event, the OBE. It is quite well literature describing transcendent states, philosophical-occult psychic literature known, for example, that many cultures attribute to shamans the capacity to fly describing OBE experiences, psychoanalytic and psychiatric data describing states out of the body.¹⁸ In fact, a shaman cannot be anointed as such unless he has that of depersonalization, psychotic, autoscopic, and hysterical-dissociative states, and capacity. According to Eliade, such flights express "intelligent understanding of dreaming.

secret things, metaphysical truths, symbolic meaning, transcendence, and free- Five psychological test scales described in our second paper were included to dom." A South African study,¹⁹ analyzing 122 accounts in response to a press distinguish the psychopathological conditions and states traditionally connected request, found that the OBE occurred often while the subject was asleep, relaxed, with a tendency toward alterations in consciousness, for example: "attention absorption."²⁶

or dozing, and that over 50% of the subjects claimed to have been in a normal state of consciousness. Demographic data focused on previous experience with consciousness-altering mental state when the phenomenon occurred.

drugs, hypnosis, and meditative experiences and to determine some of the background factors. Anecdotal accounts exist from people already convinced of the veracity and ground belief systems, including religious background and types of reading material. The validity of such experiences.⁵²⁰⁻²⁴ All contain vivid and exciting descriptions based on real.

the assumption that an objective separation and independent existence of mind from body is possible. In addition, the PAL questionnaire,²⁷ a well-validated psychological health scale, was sent to the subjects. Many of the reports are interested in what other dimensions of reality can be explored under these conditions. This instrument is one of the few available tests of reality. Eastman¹³ reported the first psychological health suitable for use in nondisturbed populations. Its health criteria—summary of conditions under which OBEs occur; for example, before, during, and after sleep, during hypnotic trance (not supported subsequently in the literature), mood states.

during illness, drug states, and after shock or accident. The sparse psychiatric literature¹¹ provides elaborate frameworks to explain the experience based on, for example, psychoanalytic theories which usually emphasize defenses against the fear of physical death. Of the 339 subjects who reported an experience, 228 (66%) have had more imminence of physical death and various ways to deal with infantile omnipotence.

than one such experience, while 117 (34%) have had only one. 74 subjects have had more than 10 OBEs. Thus OBEs are often seen as unconscious attempts to portray aspects of man's eternal quest for immortality. Literature from philosophical and psychic sources, Table 1 summarizes the conditions remembered to exist at the time OBE

A. PRE-EXISTING CONDITIONS

however, use the OBE to classify people as more or less spiritual (which usually

occurred. Of course, no cause-effect relationship necessarily occurs between these means psychologically healthy and/or with ESP ability) based on the type and conditions and the experience itself, although such has been implied by a number of authors.²⁸ An overwhelming majority of the sample were in a relaxed and calm nature of their OBE.²⁵

‘n’ *Andy* program block on NBC. Some of the other network program series he created and produced were *High Adventure* (George Sanders), *Nightmare* (Peter Lorre), *Starlight Theatre* (Madeleine Carroll), *Scramble* (Bob Ripley), *M-G-M Screen Test*, and the quiz shows *Take a Number* and *Meet Your Match*.

After an early sojourn at Donahue and Coe, Advertising, he formed Notes

Robert Monroe Productions, which at the peak of its operations was producing as many as twenty-eight radio network shows weekly. He later became vice-president of programs and director of Mutual Broadcasting * Ironson, D. S. “An

Investigation into the Preconditions, Characteristics, and Beliefs Associated with the Out-of-the-Body Experience.” Unpublished doctoral System, Inc., a position he held until mid-1956. He then became presi-dissertation, 1975. t Gabbard, G. O., Twemlow, S. W., and Gabbard, G. O. “The struction and operation of cable-TV systems in Charlottesville and OBE as an Overdetermined State of Consciousness.” Manuscript available from the corresponding author.

Waynesboro, Virginia—a position he held until April 1976.

Mr. Monroe’s major avocation in recent years has been exploration and research into practical methods of accelerated learning through expanded forms of consciousness. To augment such activity, he founded the Monroe Institute of Applied Sciences in 1973, with facilities and laboratories at Afton, Virginia. With his long and varied experience in sound, it was natural that he utilized this medium for his investigation. One of the results of his work was a method and technique of inducing relaxation and sleep, which was granted a generic patent in 1975. The technique employs a system of audio pulses which create a frequency-following response in the human brain. By this method, it is now possible to hold and maintain specific stages of sleep for any depth and duration in the average person. A later development at the Institute has utilized the same methods and technique in a form of “binaural beats” to create synchronization of both left and right hemispheres in the human brain. The unique coherent brain state that results is known as hemispheric synchronization, or “Hemi-Sync.” This discovery also permits external control of the degree of activity of either right or left brain. These two patterns, when employed in an ordered sequence to achieve specific effects, offer a significant gateway to new understanding and application of human thought and endeavor.

Along with others, the Monroe Institute (now located in Nelson County, Virginia) is exploring the potentials of such methods in all areas of individual and cultural activity.

Mr. Monroe, as executive director and founder of the Institute, still plays an active part in this educational-research organization. He is author of the book *Journeys Out of the Body* (Doubleday & Company, Inc., 1971; Anchor Press edition, 1977), which has been published in five languages worldwide. With his family, he lives on his farm in Nelson County, Virginia, near the Institute headquarters.
